Write each as a single fraction, i.e., there should be only one division. For example, $\frac{2}{5}$ and $\frac{x^2+3x+y}{y^2+3}$ are OK, but $\frac{2}{5+\frac{2}{3}}$, $\frac{2}{5/4+2}$, $\frac{x^2+3\frac{x}{y}+y}{y^2+3}$ are not.

$$\frac{1}{2}+\frac{1}{3}$$

$$\frac{1}{2+\frac{1}{3}}$$

$$\frac{\frac{1}{2}+\frac{1}{3}}{\frac{2}{5}+\frac{1}{3}}$$

$$\frac{\frac{5}{2}+\frac{2}{3}}{\frac{7}{8}+\frac{11}{3}}$$

$$\frac{\frac{5}{2}+\frac{\frac{3}{4}}{3}}{\frac{7}{8}+\frac{11}{3}}$$

$$\frac{1}{\frac{1}{2}+\frac{1}{y}}$$

$$\frac{\frac{2}{3}}{\frac{1}{x}+\frac{1}{y}}$$

$$\frac{\frac{\frac{1}{x}+\frac{2}{y}}{3}}{\frac{1}{x}+\frac{1}{y}}$$

$$\frac{1}{\frac{1}{x+1}+\frac{1}{y}}$$

$$\frac{\frac{x+1}{x-1}+\frac{y+1}{2y-1}}{\frac{x-1}{x+1}+2y}$$

$$\frac{\frac{x}{x+1}+y}{\frac{1}{x+1}+\frac{1}{y}}$$

$$\frac{\frac{x}{x-1}-y}{\frac{1}{x+1}+\frac{1}{y^2+1}}$$

$$\frac{\frac{2x}{2x-2}-y}{\frac{3}{3x+3}+\frac{1}{y^2+1}}$$
